

How to establish God's Holy Days !

God tells us the new moon is the beginning of the month. The first month of days is Abib. The Passover is to be celebrated in the Spring. The Spring turn or equinox is the first day of Spring. Find the date of the Spring turn or equinox at Jerusalem time zone. This is used as a standard because it will be GOD'S headquarters.

Establish the time of the beginning of the true dark moon phase. This establishes the first day of the year. Count 14 days starting with the first day to find Passover. If Passover is on or after the Spring turn or equinox, we can continue to calculate the rest of GOD'S Holy Days.

If Passover falls before the Spring turn or equinox, then it would not be in it's appointed season and we would simply go to the next new dark moon and establish that as Abib 1. The Passover would be 14 days later and the 15th to the 21st are the Days of Unleavened Bread. The wave sheaf Sunday occurring within the Days of Unleavened Bread establishes the commencement for counting 7 complete Sabbaths before the Feast Of Weeks, which will fall on Sunday after the 7th completed Sabbath.

To find the 7th month, count 7 new dark moons starting with Abib 1. The 7th new dark moon is the beginning of the 7th month of days and is the Feast of Trumpets. Then we count 10 days starting with the 7th new moon to find the Day of Atonement and the 15th to the 21st day are the Feast of Tabernacles and the 22nd is the Last Great Day.

THIS IS WHAT GOD SAYS IN LEVITICUS 23:
